

Reasoning

Ron thinks he has £13

Is he correct?
Explain your answer.

Explain the mistake.

£2, £4, £6, £7, £8, £10

Answers

Ron thinks he has £13

Is he correct?
Explain your answer.

No, because three
£2 coins make £6

£10 and £6 is
equal to £16

He has mistaken
his £2 coins for £1
coins.

Explain the mistake.

£2, £4, £6, £7, £8, £10

£7 is the mistake.
It is an odd
number. The 2
times table are all
even.

When counting in
£2s, we would say
£2, £4, £6, £8,
£10
