

Count in 50s

Deeper

### Explain your answer

Eli and Mia are planning their white water rafting route down the river. They want to make the distance a multiple of 50m.

Which routes could they **not** take?

150m

275m

400m

850m

675m

720m

There are some rowing boats for hire. The boats are numbered from 100 to 600, going up in 50s.

How many boats are there in total?

Which statements are incorrect?

Multiples of 50 are always even numbers.

If I count up in 50s from 0, I will reach 1000.

Multiples of 50 are always multiples of 100.

Multiples of 50 always have a 5 as one of the digits.
